WORK HISTORY

University of North Dakota – Grand Forks, ND

Junior Software Engineer, 07/2023 to current

User Support Specialist (Software Engineer externship), 04/2023 to 07/2023

Worked on full-stack web application design, development, testing, and implementation using programming languages such as PHP, HTML, JavaScript, and CSS. Gained experience with SQL query development and relational database software. Web applications built using Angular front-end framework, and Symfony PHP framework. Used Git version/source control software in accordance with Gitlab and Github to track changes over time and issues related to application code. Used JetBrains PhpStorm as an integrated development environment (IDE) with generative AI technologies such as Github Copilot, ChatGPT and Claude to increase efficiency in documentation, development and testing workflow. Used data formats including JSON, XML, CSV and REST API protocols to create a client-server architecture with all projects.

University of North Dakota – Grand Forks, ND

User Support Specialist, 04/2021 to 07/2023

Information Technology Assistant, 09/2018 to 02/2020

Educated customers over the phone or in-person on troubleshooting problems with University or Personal hardware/software. Gained four years of experience with general information technology and endpoint support. Maintained up-to-date knowledge on technical problems and fixes to provide customers with quick, well-informed answers. Worked in a structured, process-driven environment independently in tangent with problem-solving skills answering phone calls, chat support, and in-person support. Used strong team player skills to work with coworkers on more demanding problems. Documented all issues using Team Dynamix and followed up with tickets after collaborating with other coworkers.

WORK HISTORY CONT.

University of North Dakota – Grand Forks, ND

Dining Room Attendant, 09/2020 to 04/2021

Ensured cleanliness of dining room at Wilkerson Commons. During high traffic periods, served food to incoming students from various areas. During low traffic periods, prepared food and cleans dining areas. Occasionally acted as cashier, greeting and scanning in all students that enter the dining area.

Tomahawk Scout Reservation – Birchwood, WI

Program/Kitchen Specialist, 06/2016 to 08/2016

Outpost Instructor, 06/2017 to 08/2017

Ecology Area Director, 06/2018 to 08/2018

Delivered fun experiences to campers that built character, citizenship, fitness, and family. Have gained experience managing subordinates, leading and instructing large groups of people, building maintenance and upkeep, administering first aid, maintaining high customer satisfaction, and entertaining children ages nine and ten. Strong leader that uses sound decision making, critical thinking, and teamwork to accomplish tasks and sustain outstanding customer satisfaction. Overperforming counselor recommended for a promotion every year. Many compliments on excellent customer satisfaction throughout the years.

PROJECTS

Aluminis Management Panel – 09/2024 to current

A game server modding platform for managing hosted services to end users. Utilizes cloud computing technologies and data warehousing to spin up services on the fly. Integrates with modern game authentication API's to correlate data between the web panel and in-game services/mods. While still in the setup/planning phase, this project has potential to improve multiplayer gaming communities.

Aericasa – 11/2024 to 01/2025

Bug fixes and improvements to existing startup full-stack web application. Implemented requested changes in a timely manner. Learned frameworks such as React, NextJS and furthered experience with Typescript. Provided consulting on potential fixes for future issues and improvements in existing system.

UND Event Manager – 04/2023 to 07/2023

Full-stack client-server system to track events (or programs) at UND. Learned HTML, CSS and Typescript using the Angular front-end framework to turn no experience to a quality front end in a few months. Collaborated with other UND backend developers to connect the Front-end with the Back-end for a well made client/server architecture.

Aluminis – 02/2018 to 02/2023

Modded gaming server (Minecraft) with custom backend systems and network infrastructure. Backend systems run on Ubuntu Linux servers and hook into game APIs to enhance the game experience when connected to the server. Java was the high-level programming language used to create the backend systems. Network infrastructure allowed users to cross servers without interrupting the in-game experience.

EDUCATION

University of North Dakota – Grand Forks, ND

Bachelor of Science: Computer Science, 2027

Minors: Atmospheric Science, 2027

UND Student since 2017 with a transition to full time work for UND in 2020. 2+ years coursework in software development with an emphasis of Computer Science and Atmospheric Science. Graduation has been delayed due to maximum credits offered as part of the Employee Assistance Program at UND.
